Daniel Gomez
Giuliano Gonzalez
Ronald Nicoletti
Jakob Willis
Michael Yara

Introduction: How can we bring life to the Creative Village area?

(Gillespie, 2022)

On our first walk through the Creative Village, and West Livingston Street, our group noted the ‘beginnings’ of a people-centric space: some mixed-uses, wide sidewalks, multi-model transit, etc.

However, we couldn’t help thinking, “why does this new space feel so empty?” Additionally, “why are the only people here students… is there nothing else to do outside of going to campus?”

Keeping these questions in mind, we worked together to devise six **initial issues** we believed contributed to this area’s underutilization…

Initial Issues:
What contributes to this area's lack of use?

- **#1:** Underutilized spaces.
- **#2:** Unsafe intersections.
- **#3:** Underutilized rail infrastructure.
- **#4:** Inefficient bus lanes.
- **#5:** Unprotected bike lanes.
- **#6:** Unshaded and uneven pedestrian paths.

#3

#4

#5

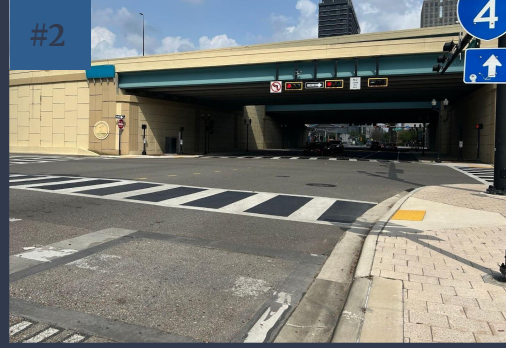

#6

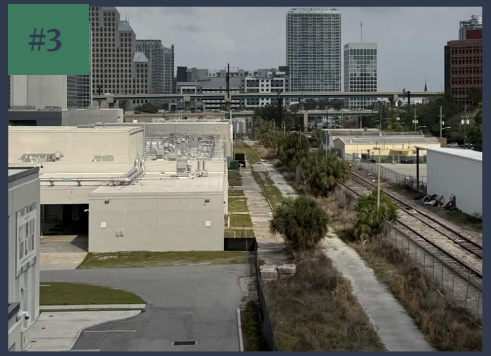

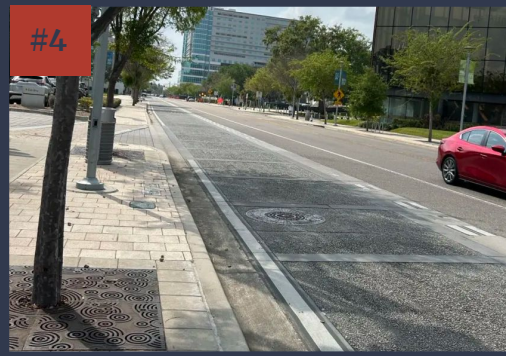

Initial Goals:
Based on these issues, what are our design goals?

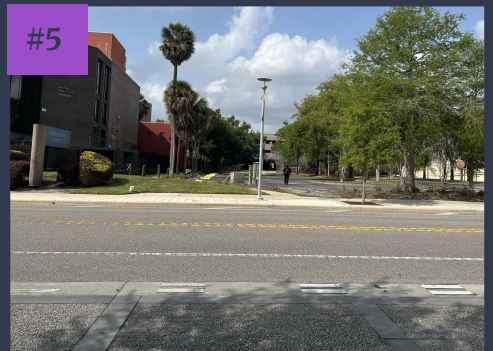

- #1: Enhance the streetscape's social use.
- #2: Strengthen the street network's connectivity.
- #3: Create imagability through rail infrastructure.
- #4: Elevate bus reliability and user experience.
- #5: Create safe bike lanes that encourage usage.
- #6: Establish cohesion between paths and uses.

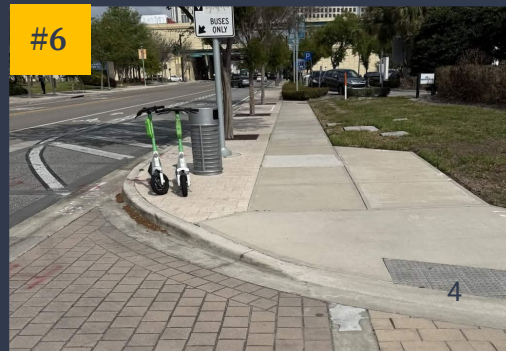

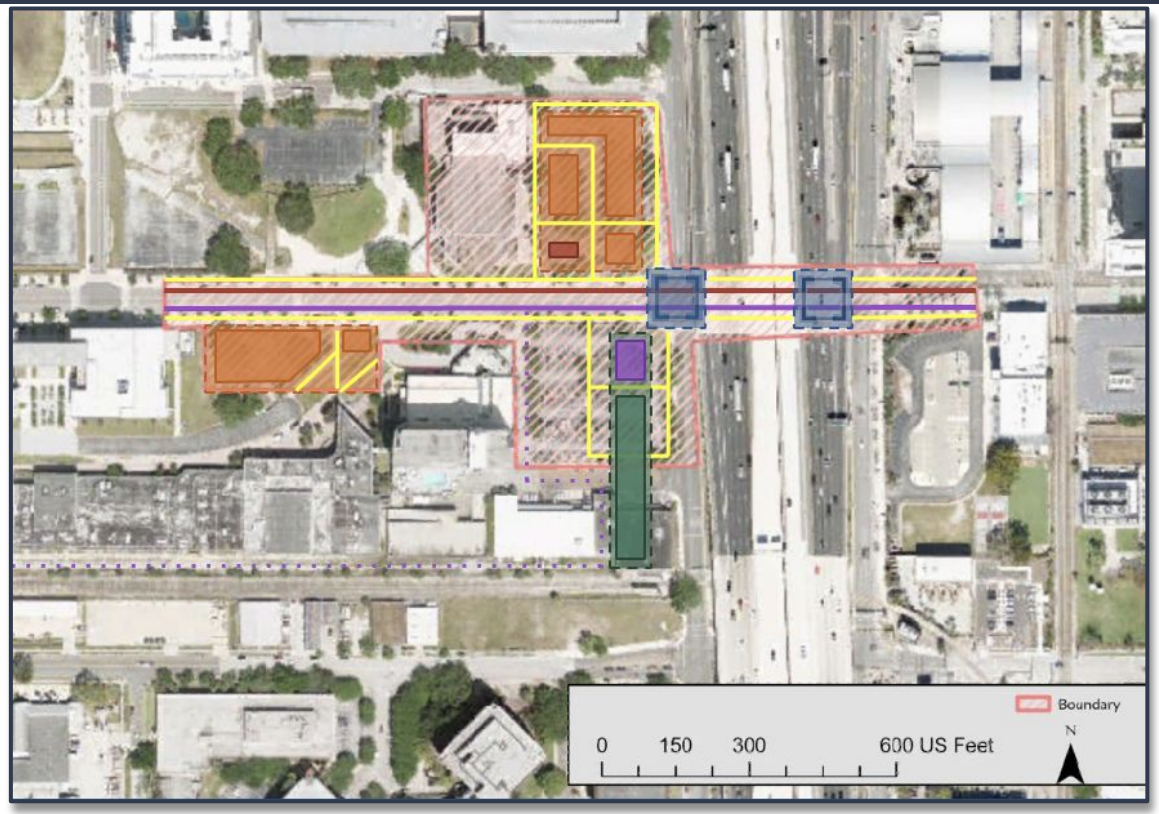

Early Concept: Draft 2D Map

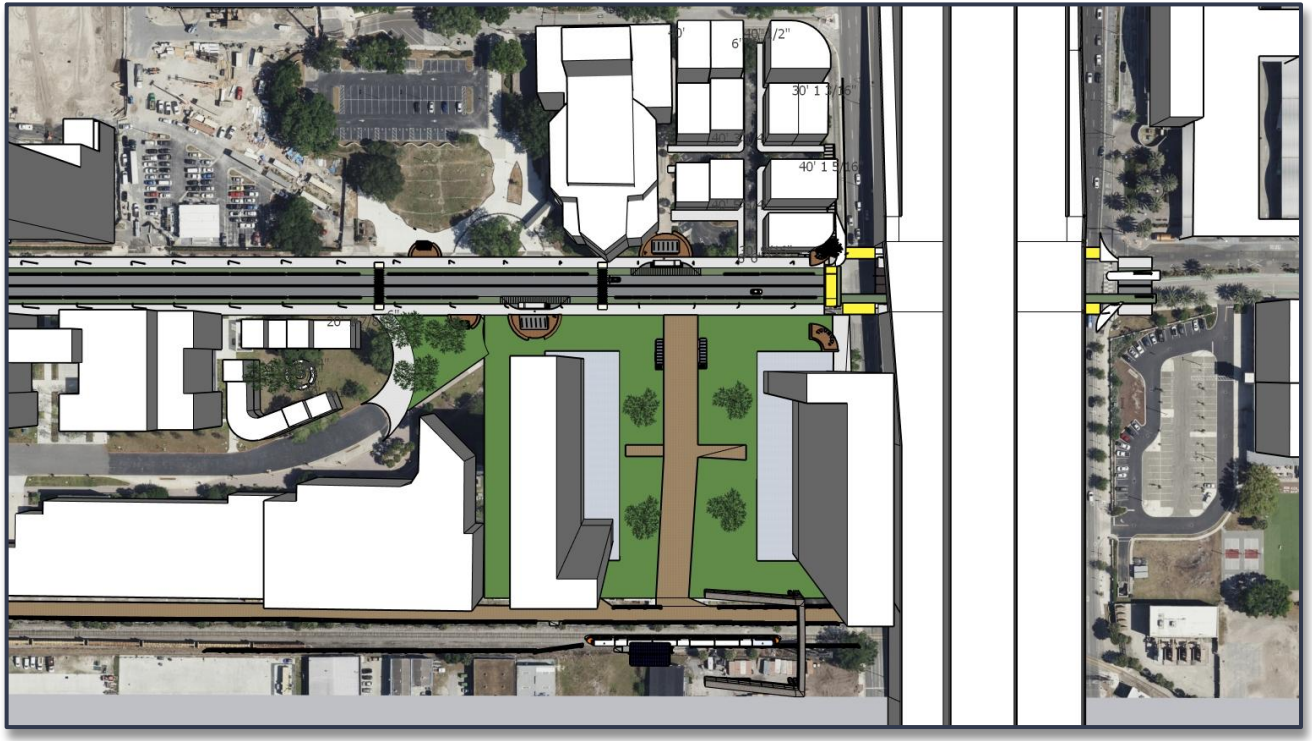

Map Legend

- Mixed-Use Space
- Protected Intersections
- Transit Hub
- Bus Stop and Lane
- Bike Stop and Lane
- Cohesive Sidewalks

North ↑

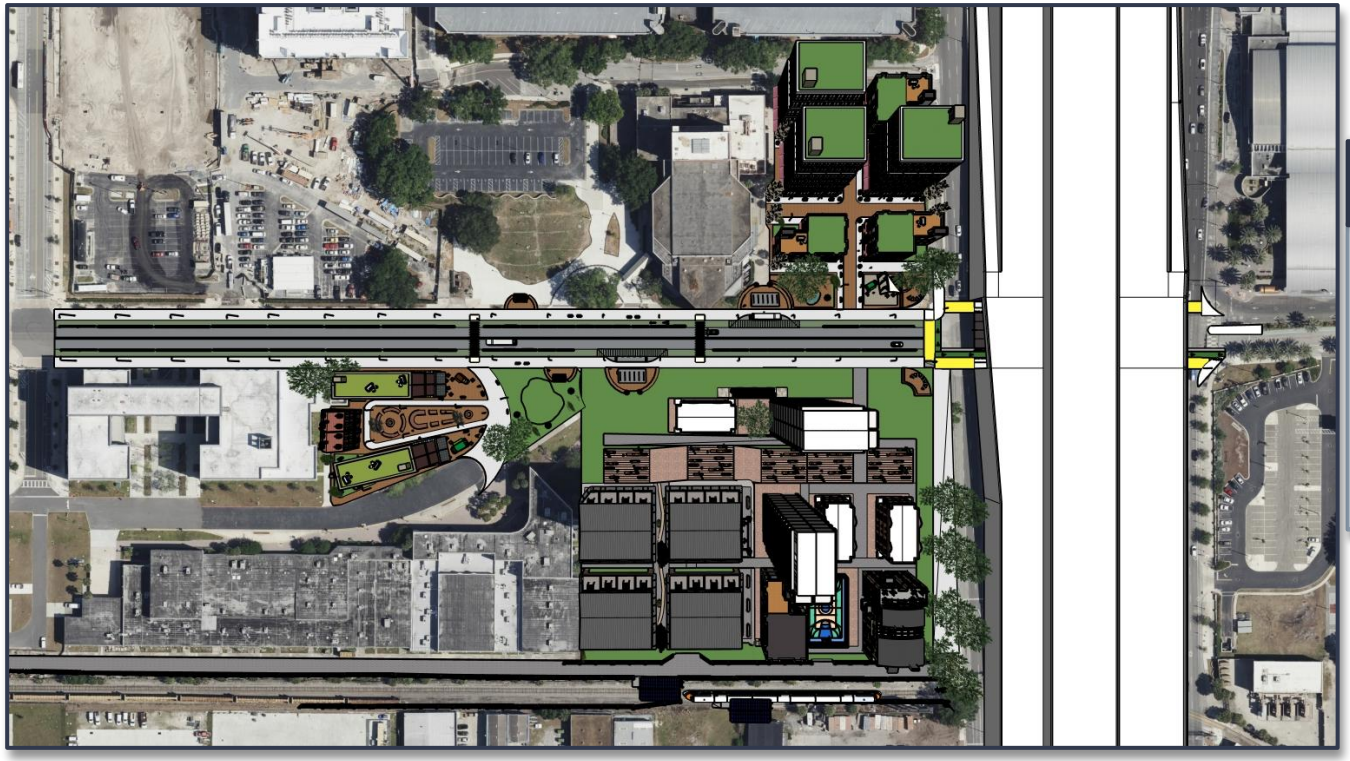

Early Concept: Draft 3D Model

Draft 3D Model Elements

- High Density Mixed-Use.
- Medium Density Mixed-Use.
- Upgraded Underpass.
- Protected Intersections.
- Rail Stop and Corridor.
- High Density Mixed-Use.
- Compact Roads.
- New Bus Stops.
- Protected Bike Lanes.
- New Bike Shelters.
- Uniform Sidewalks.
- Pedestrian Shelters.

Final Concept: Final 3D Model

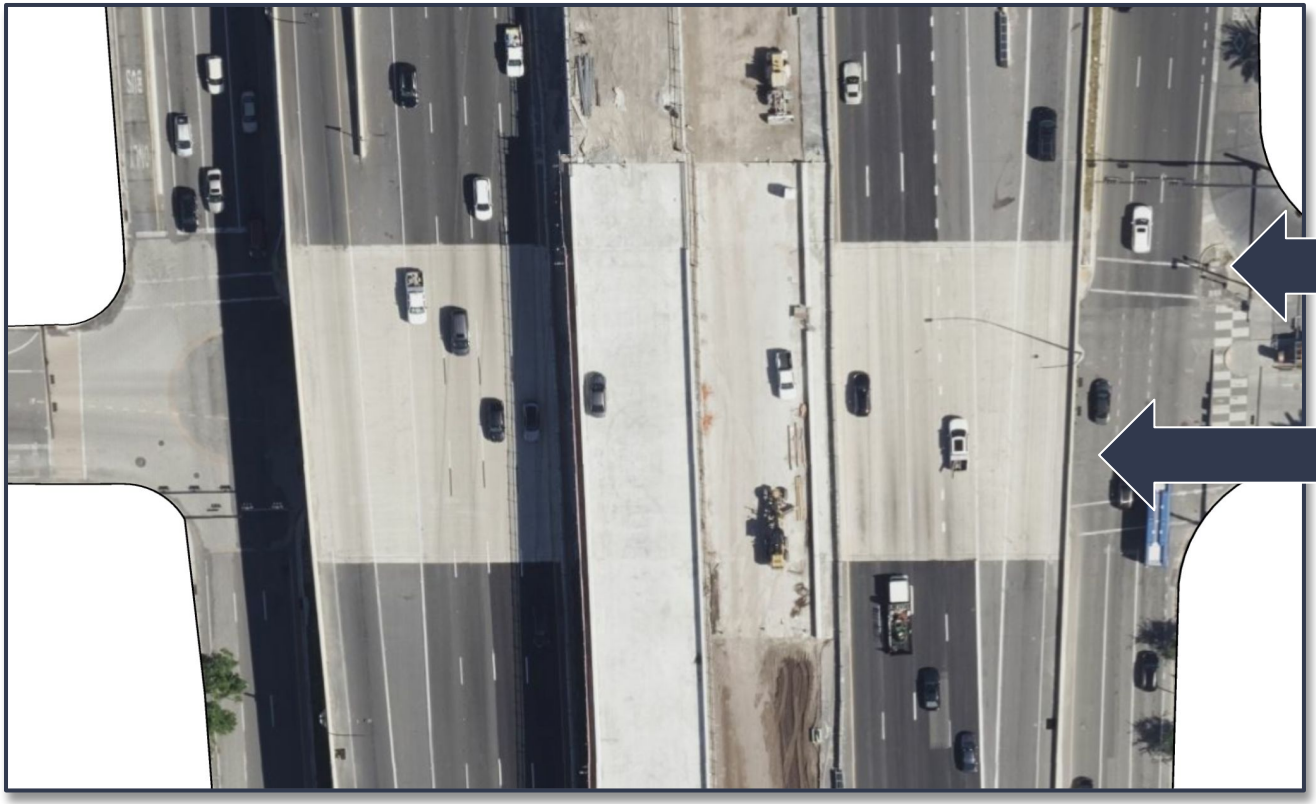

Final 3D Model

Areas of Interest:

- Upgraded I-4 Underpass.
- New Mixed-Use Villages.
- Marriott Replacement and New Sunrail Stop.

Upgraded I-4 Underpass

Upgraded I-4 Underpass: Morphology Before

Morphology Before

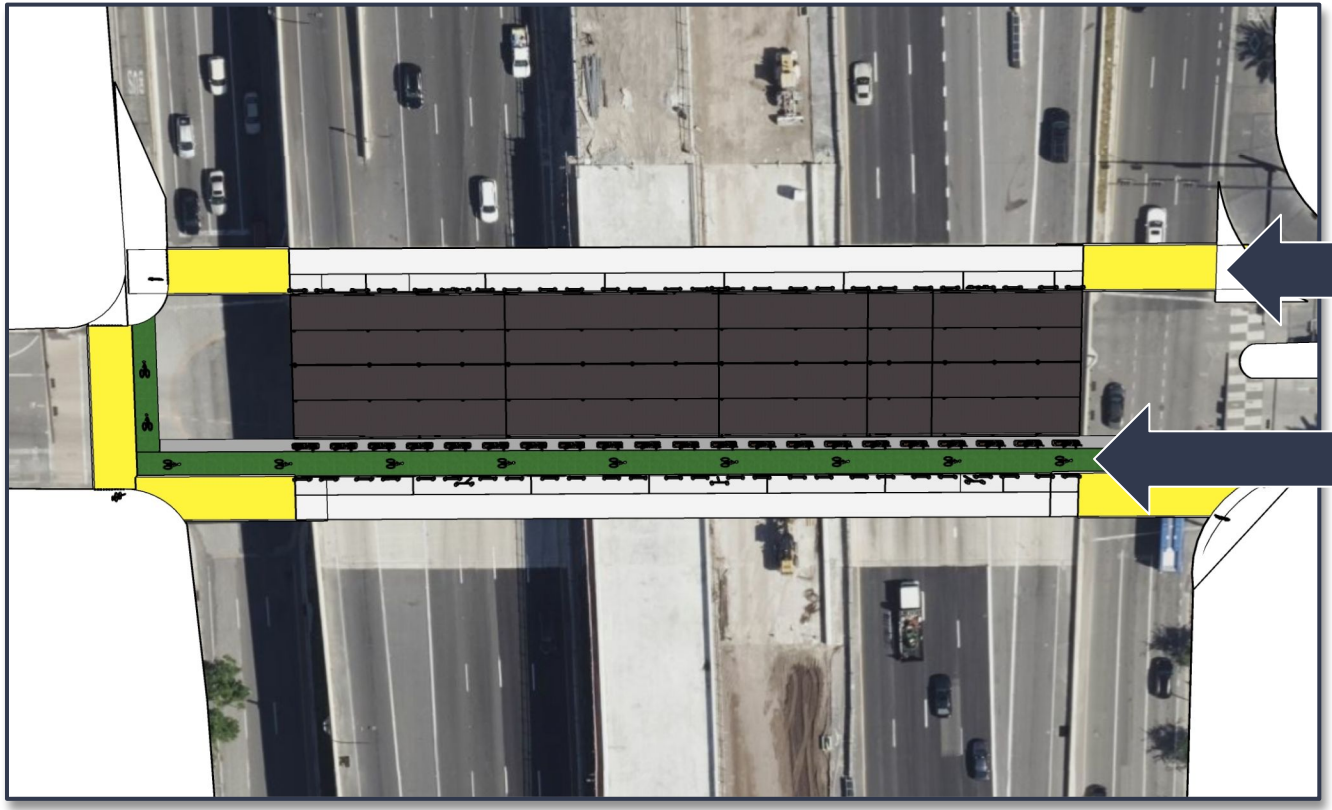

Feature #1:

Unprotected pedestrian crossings, and no existing bike crossings, throughout intersections.

Feature #2:

Dimly lit, unprotected, and undecorated underpass.

Upgraded I-4 Underpass: Morphology After

Morphology After

Feature #1:

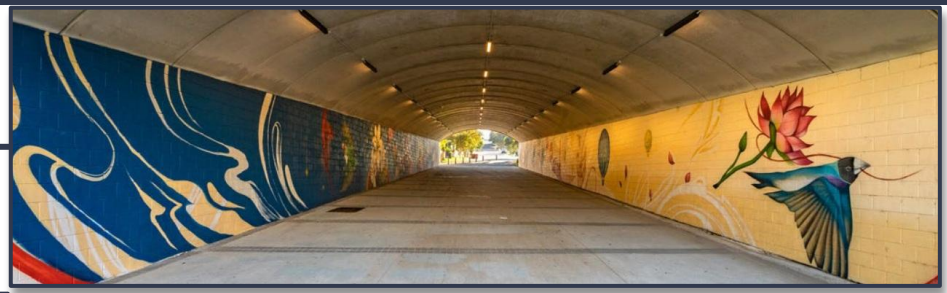

Protected pedestrian and bike crossings throughout intersections.

Feature #2:

Well-lit, protected, and decorated underpass.

Upgraded I-4 Underpass: Inspirations

Pedestrian Underpass Design Guideline (Sydney, AUS)
(PCL Construction, n.d.).

5 Street S.W. Underpass Enhancements (Calgary, AB)
(Transport for NSW, 2023).

Upgraded I-4 Underpass: Public Spaces

Feature #1 Utilization:

- Protected, pedestrian and cyclist-focused intersection.

Feature #2 Utilization:

- Permeable, human-scaled underpass.

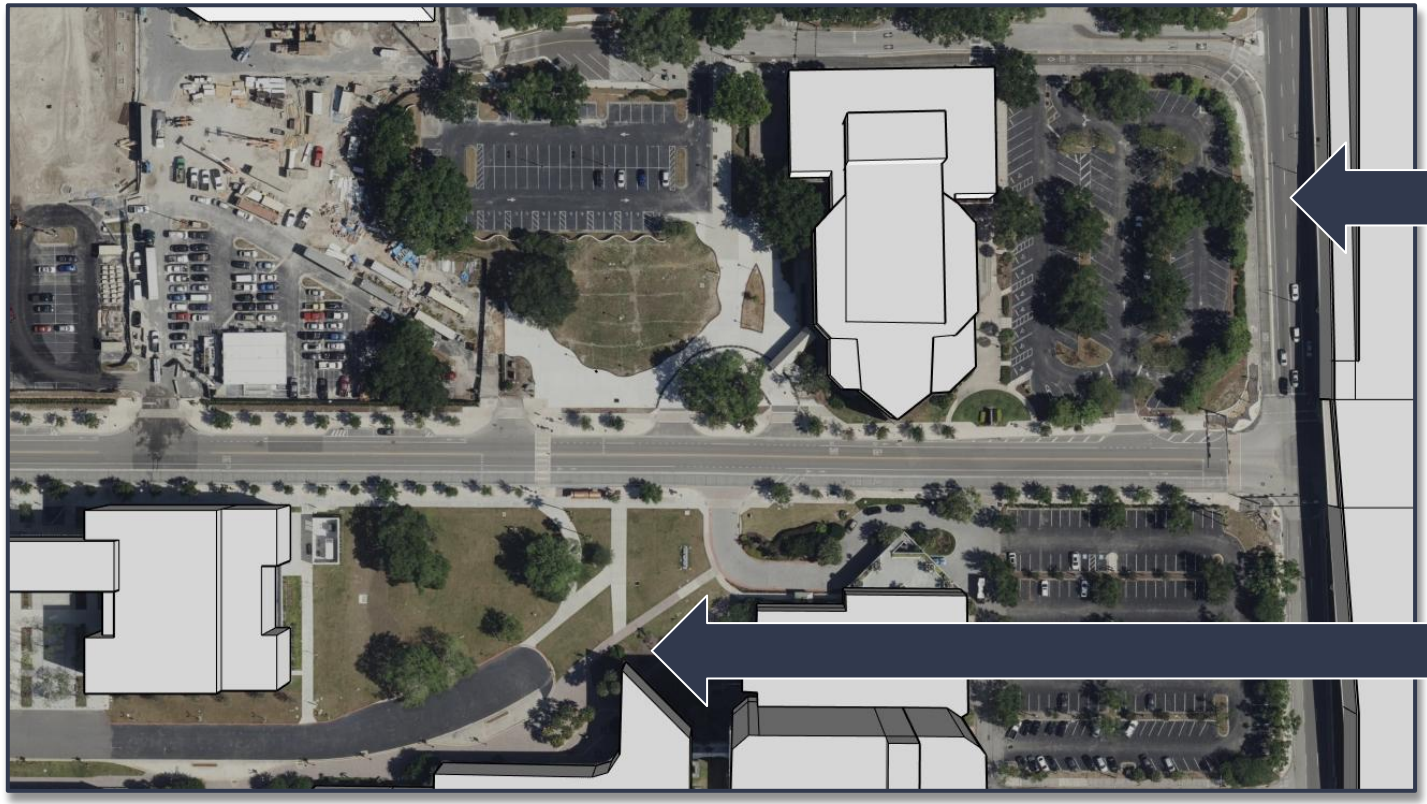

Why focus on these features?

These renders were completed to address the prior street network's lack of connectivity and safety:

- Connectivity: Improved connectivity and circulation.
- Safety: Enhanced safety through lighting, signage, and separation.

New Mixed-Use Villages

New Mixed-Use Villages: Morphology Before

Morphology Before

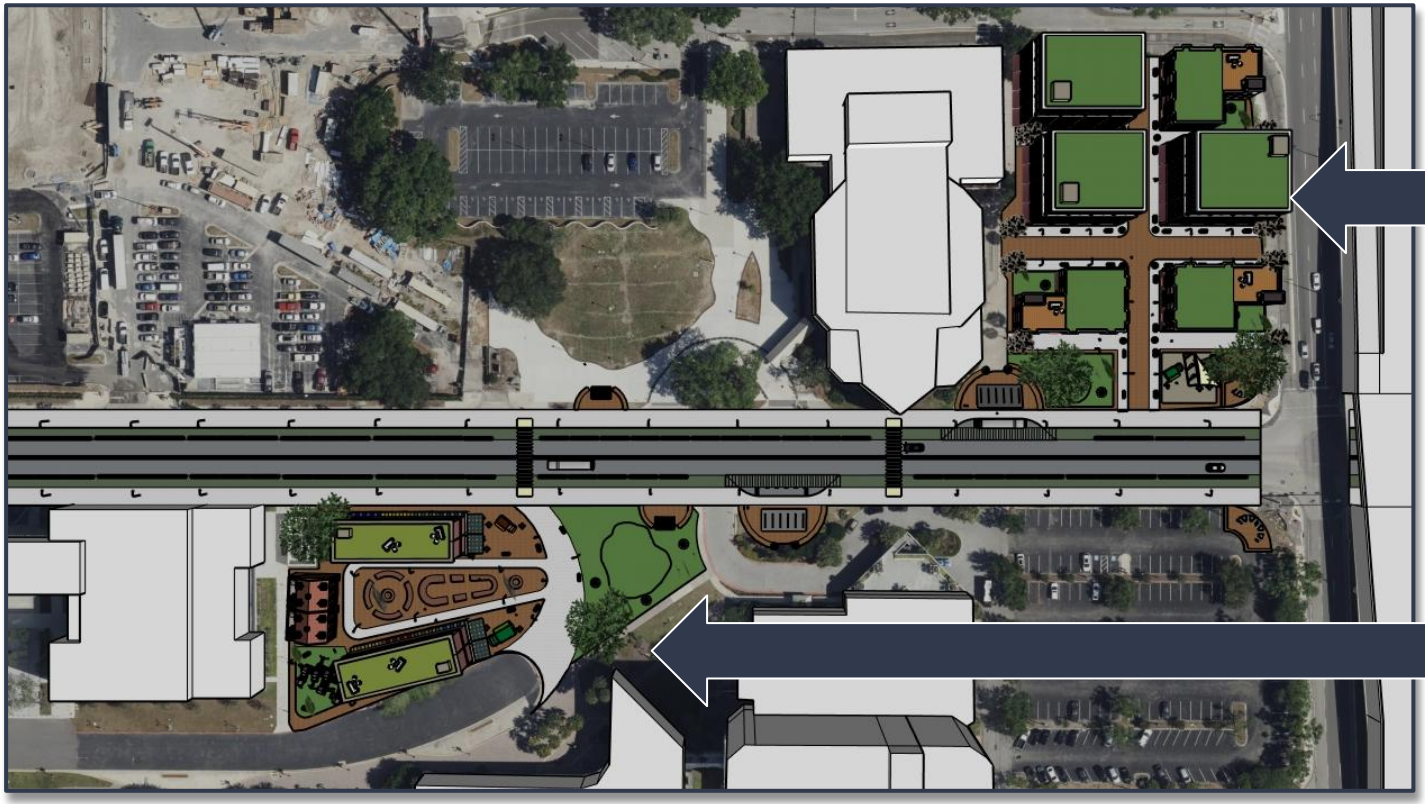

Feature #1:

Underutilized surface parking near Bob Carr Theater.

Feature #2:

Underutilized open space near UCF DPAC.

New Mixed-Use Villages: Morphology After

Morphology After

Feature #1:

High-density residential with other uses.

Feature #2:

Medium-density residential with other uses.

New Mixed-Use Villages: Inspirations

Building Enclosure
(Downtown Orlando, FL)
(Nelson\Nygaard Consulting Associates, n.d.).

Local Uses and Character
(Winter Park, FL)
(McDonald, 2018).

New Mixed-Use Villages: Public Spaces

Feature #1 Utilization:

- Six mixed-use buildings (with high-density residential).

Feature #2 Utilization:

- Four mixed-use buildings (with medium-density residential).

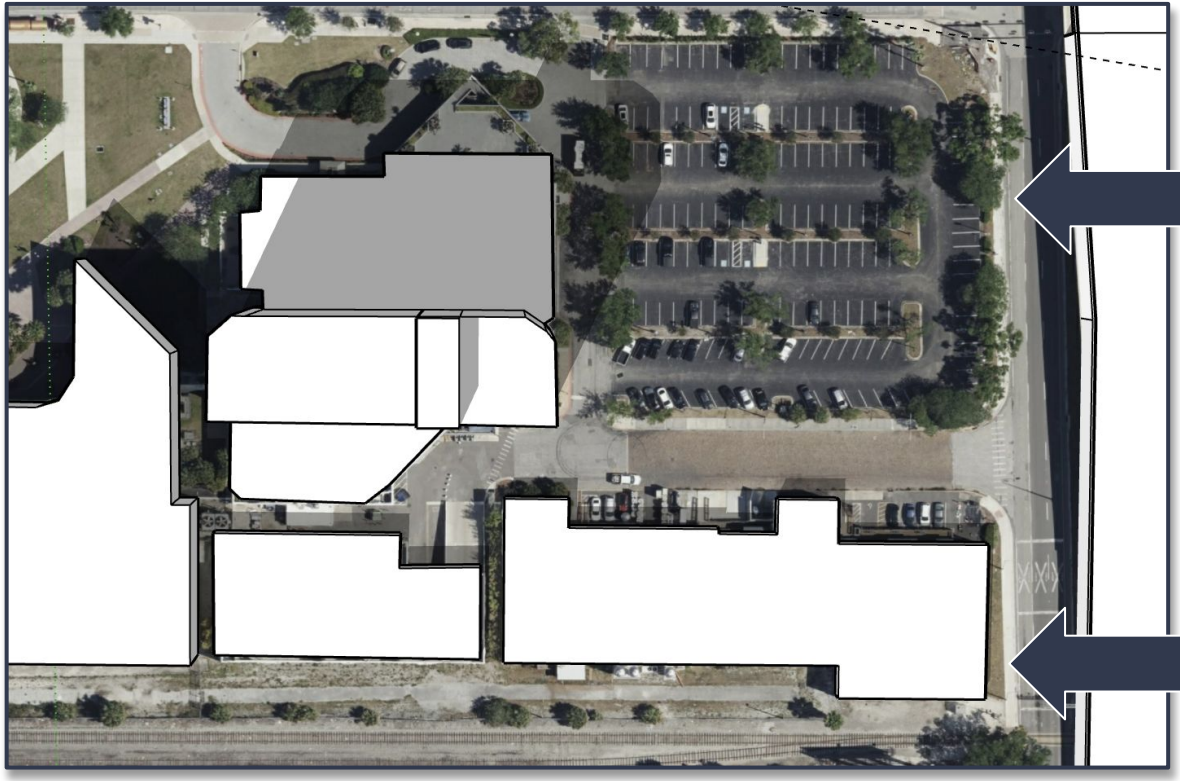

Why focus on these features?

These renders were completed to address the prior land uses' lack of enclosure, use, and character:

- Enclosure: Buildings establish positive space and enclose social activity.
- Use: Commercial and retail uses are made accessible to pedestrians. Other floors offer residential use.
- Character: Brick pavers, street trees, and color make these areas more visually distinct and inviting.

Marriott Replacement & New Sunrail Stop

Marriott & SunRail: Morphology Before

Morphology Before

Feature #1:

Marriott Hotel with an underutilized parking area.

Feature #2:

Obstructed rail infrastructure.

Marriott & SunRail: Morphology After

Morphology After

Feature #1:

High-density residential with other uses.

Feature #2:

Accessible SunRail station.

Marriott & SunRail: Inspirations

High-Density Residential (Miami, FL)
(Wynwood Plaza, n.d.).

Rail Station and Corridor (Charlotte, NC)
(CATS, n.d.).

Marriott & SunRail: Public Spaces

Feature #1 Utilization:

- High-density residential (with mixed-uses).

Feature #2 Utilization:

- Accessible SunRail station.

Why focus on these features?

These renders were completed to address the prior land uses' lack of enclosure, use, imageability, and permeability:

- Enclosure: Buildings surround sidewalks, creating positive space within the urban environment.
- Use: Mixed-uses and hard and soft landscaping, offer places for social activity and engagement.
- Imageability: Rail station creates a distinct visual landmark in the urban environment.
- Permeability: New connections to the main street network create a more permeable urban grain.
